Clinical Track Scholarly Contribution

Clinician-Research Scholar (translational science, clinical research, health services research)

As a Clinical Associate Professor within the Department of Pediatrics and the Child Health Evaluation and Research (CHEAR) Center at the University of Michigan, I am dedicated to patient-oriented research. Since 2005, I have served as the pediatric psychologist within the Pediatric Liver Transplant program, providing comprehensive clinical care to pediatric transplant recipients and their families. My primary research activities focus on the promotion of medication adherence, health care transitions, and health-related quality of life (HRQOL) in pediatric solid organ transplantation and pediatric liver disease. I am also involved in collaborative research focused on the promotion of self-management skills in other pediatric populations including childhood cancer survivors, children with obesity, children with diabetes, and adolescents with inflammatory bowel disease (IBD). My research activities have been continuously supported through funding from the University of Michigan and the NIH.
